IMPORTANT
This booklet is intended as a basic specification guide for architects, designers and builders. Please refer to the Instruction Manual supplied with the fireplace for detailed information regarding installation and operation. Product installation manuals can also be viewed at: www.townandcountryfireplaces.com
Fireplace Dimensions

Examples of Common Locations

### Minimum Clearances to Combustibles

- Side standoffs: 0 in. (0 mm)
- Back standoffs: 0 in. (0 mm)
- Top standoffs: 0 in. (0 mm)
- Bottom of appliance: 0 in. (0 mm)
- Adjacent sidewall: 4 in. (102 mm)
- Ceiling to appliance: 24 in. (610 mm)
- Mantel to appliance: See above
- Maximum mantel extension: See above
- Mantel support: 4" (102 mm)
- Vertical vent pipe: 1 3/4" (45mm)
- Horizontal vent pipe: (Top, sides and bottom) 1 3/4" (45mm)

For reference only. Consult Manual before installation.
Steel Stud Framing Kit Dimensions
Kit supplied with unit

Non-combustible Zone. Do not install any combustible material, electric wiring, insulation, plastic vapour barrier or gas plumbing within the steel stud frame.

Non-combustible Board Detail

All other framing can be done with conventional lumber.

Minimum Combustible Framing Dimensions

Non-combustible board (or other non-combustible material) must extend 12" above and 5 1/2" to the sides of the framing edges.

NOTE: Fireplace should be in its final location before framing.
Maestro Control System

Town and Country C Series fireplaces include our award winning Maestro controls.

They include an elegant, programmable remote control with a count-down timer, weekday/weekend on/off timer, manual control and thermostat mode (where permitted), and an easy to read LCD display.

They also come with a small wall-mounted control which permits on/off operation, flame modulation and houses the battery back-up system for operation during power outages.

Maestro controls use an on-demand electronic ignition system, a green alternative to standing pilots, which can cut your annual fuel consumption up to 74%.

Hearth Extension

Caution: While a hearth extension is not required and combustible flooring materials may be brought directly up to the fireplace, many materials (such as wood flooring) may not tolerate the radiant heat from this fireplace, resulting in discoloration, shrinking and cracking. For this reason, we suggest a non-combustible hearth that is no more than 1” above the bottom of the fireplace. If thicker, fireplace must be raised accordingly.

Caution: Hearth extensions thicker than 1” will interfere with the window frame when opening.

Side Facing Clearances

Caution: This fireplace may be recessed up to a maximum depth of 6”, this recess must be constructed from non combustible material. The space between the outside framing edge and the firebox must be completely free of any obstructions or debris and the window, with trim fitted, must be able to move freely. No building material is permitted to protrude past the framing edges attached to the fireplace under ANY circumstance.
Direct Vent Wall Installation

* Minimum height from the floor to center of the opening with a maximum horizontal run of 18" from the center of the flue outlet to the outside face of the outer wall. The height will need to be increased if a longer horizontal pipe is required.
For reference only. Consult Manual before installation

</tbody>
</table>

**All dimensions are approximate. Both rise and run may vary with different combinations of pipe.**

**NOTE: The vent must not exceed a total length of 68 feet. Any combination of rise and run may be used, but must be constrained to the boundaries of this chart. A total of four 90° elbows, or combination of other elbows equaling 90° can be used without reducing horizontal run. For each additional 90° elbow, or an equal combination of elbows, reduce horizontal vent run by 2 feet. Ensure vent pipe is properly supported.**

For other rise/run combinations see chart below

NOTE: The vent must not exceed a total length of 68 feet. Any combination of rise and run may be used, but must be constrained to the boundaries of this chart. A total of four 90° elbows, or combination of other elbows equalling 90° can be used without reducing horizontal run. For each additional 90° elbow, or an equal combination of elbows, reduce horizontal vent run by 2 feet. Ensure vent pipe is properly supported.
Vent Terminal Clearance

Minimum clearances to the vent terminal must be maintained as shown (See illustration to right & below). Measure clearances to the nearest edge of termination hood. (See pitch table below).

NOTE: Vent terminal must not be recessed

NOTE: LOCAL CODES OR REGULATIONS MAY REQUIRE DIFFERENT CLEARANCES.

<table>

Vent Terminal Minimum Clearances

A= *12 inches (30 cm) min. Clearance above grade, veranda, porch, deck, or balcony
B= *12 inches (30 cm) min. Clearance to window or door that may be opened
C= 12 inches (30 cm) min. Clearance to permanently closed window recommended to prevent condensation on window
D= 30 inches (76 cm) min. Vertical clearance to ventilated soffit located above the terminal within a horizontal distance of 2 feet (60 cm) from edge of the terminal
E= 30 inches (76 cm) min. Clearance to unventilated soffit
F= 6 inches (15 cm) min. Clearance to outside corner
G= 6 inches (15 cm) min. Clearance to inside corner
H= 3 feet (90 cm) min. *Not to be installed above a meter/regulator assembly within 3 feet (90 cm) horizontally from the center-line of the regulator
I= *6 feet (1.8 m) min. Clearance to service regulator vent outlet
J= *12 inches (30 cm) min. Clearance to non-mechanical air supply inlet to building or the combustion air inlet to any other appliance
K= *6 feet (1.8 m) min. Clearance to a mechanical air supply inlet
L= *7 feet (2.1 m) min. ^ Clearance above paved side-walk or a paved driveway located on public property
M= **30 inches (76 cm) min. Clearance under veranda, porch, deck, or balcony

^ a vent shall not terminate directly above a side-walk or paved driveway which is located between two single family dwellings and serves both dwellings*

** only permitted if veranda, porch, deck, or balcony is fully open on a minimum of 2 sides beneath the floor*

* as specified in CGA B149 Installation Codes, Note: local Codes or Regulation may require different clearances

* for U.S.A. Installations follow the current National Fuel Gas Code, ANSI #Z21.50.b

For reference only. Consult Manual before installation
Optional Power Vent

Reach almost any room or commercial setting. Optional Power Venting allows runs up to 110’ from an outside wall or roof surface. Vent horizontally or vertically with up to six 90-degree elbows, including runs up to 3’ below the fireplace.

The premium Power Vent fan runs quietly outside, at the exterior terminal.
